DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 28 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 6,671,284 to Yonge et al in view of U.S. patent 4,439,859 to Donnan.

Yonge teaches a processor in a base station (col 4 line 35) employing OFDM (see abstract) wherein a serial number relating to the number of bits per symbol (and symbol block sizes) is used by the transmitter, as described in col 7, lines 60 to col 8, lines 13+, wherein this information is generated from channel map data, as mentioned in Col 8, line 5. Yonge also teaches ARQ in col 11, lines 35+. Yonge does not, however, teach this ARQ and its associated retransmission to occur through the use of a retransmission bit. The use of a retransmission bit is taught in Donnan. See col 21, line 15. It would have been obvious to one of ordinary skill in the art at the time of the invention to have used a retransmission bit in Yonge in light of the teachings of Donnan in order to provide a means for signaling to the transmitter that a message needs to be retransmitted.

3. Claims 1 – 27 and 29 are allowed.
